

AI-MATESTI

AI-Powered Construction Material & Cost Estimation Platform

Submitted By

Bhanupriya G

LOGIN PAGE:

The image shows a login page for 'AI MatEsti', a Construction Estimation Platform. The page features a blue gradient background with a subtle grid pattern. A white login card is centered, containing the AI MatEsti logo (a blue square with a white building icon), the platform name, and its tagline. Below this, there are input fields for 'Email Address' (containing 'demo@aimatesti.com') and 'Password' (masked with dots). A 'Remember me' checkbox and a 'Forgot password?' link are positioned below the password field. Two buttons are at the bottom: a blue 'Sign In' button and a white 'Use Demo Account' button. At the very bottom, a demo login credential is provided: 'Demo: demo@aimatesti.com / demo1234'.

The **AI MatEsti Login Page** provides a clean, modern, and professional interface for the Construction Estimation Platform. The design uses a **blue gradient background with a subtle grid pattern**, reflecting the project's construction and technology theme. The centered white login card provides a simple and visually clear layout, with the **AI MatEsti** branding prominently displayed. Overall, the page creates a **professional, user-friendly, and trustworthy first impression** of the application.

Dashboard Page:

The **Dashboard** provides an overview of the AI MatEsti construction platform. It displays key project statistics, quick actions, monthly estimation trends, and project types. The sidebar provides easy access to **Projects**, **Drawing Analysis**, **Material Estimation**, **Cost Estimation**, **BOQ**, **Reports**, and **Settings**.

PROJECTS PAGE:

The **Projects Page** displays all construction projects in the AI MatEsti platform. It provides project details such as **project name, client, type, location, area, number of floors, status, and creation date**. Users can search and filter projects and also **create, view, edit, or delete projects** from this page.

DRAWING ANALYSIS PAGE:

The **Drawing Analysis Page** is designed for uploading and analyzing construction floor plans and drawings. Users can select a project and upload **PDF, JPG, or PNG** drawings for **AI-assisted analysis**. The page provides a simple drag-and-drop interface along with options to upload **PDF plans and floor images**.

Material Estimation Page:

The **Material Estimation Page** calculates the required construction materials and their estimated costs for a selected project. It displays key details such as **project area, number of floors, number of materials, total material cost, and cost per square foot**. The **Material Breakdown** and **Cost Distribution** sections provide a clear overview of material quantities and their contribution to the overall cost.

Cost Estimation Page:

The **Cost Estimation Page** provides an overall view of the estimated construction cost for a selected project. It displays the **total project cost and cost per square foot**, along with a breakdown of **material, labor, equipment, other expenses, GST, and contingency costs**. This page gives a clear summary of the project's expected budget.

Bill of Quantities (BOQ) Page:

The **Bill of Quantities (BOQ) Page** provides a detailed summary of the materials required for a construction project. It displays **materials, categories, quantities, units, rates, total amounts, and remarks**. The page also allows users to **generate, add, edit, delete, and print BOQ items**, making it useful for organized project planning and cost management.

Tender / Quotation Page:

The **Tender / Quotation Page** is used to create professional tender documents and quotations for clients. It displays important project details such as the **client**, **project type**, **area**, and **estimation status**. The page also provides an option to **create and manage tender documents** for formal client quotations.

Reports Page:

The **Reports Page** is used to generate and manage comprehensive project reports. It allows users to select a project and generate a **project report** containing relevant project information. Generated reports are listed with their **title, type, date, and view option**, making them easy to access and review.

Materials Database Page:

The **Materials Database Page** stores and manages construction material information used by the AI MatEsti platform. It displays details such as **material name, category, unit, rate, and location**. Users can search materials, filter them by category, and **add, edit, or delete material records** for efficient cost and estimation management.

Settings Page:

The screenshot displays the 'Settings' page of the 'AI MatEsti Construction Platform'. The interface includes a dark sidebar with a 'MAIN MENU' containing links to Dashboard, Projects, Drawing Analysis, Material Estimation, Cost Estimation, BOQ, Tender / Quote, Reports, Materials DB, and Settings (which is highlighted). The user's name 'Rajesh Kumar' and role 'admin' are shown at the bottom of the sidebar, along with a 'Logout' button. The main content area is titled 'Settings' with the subtitle 'Manage your account and application preferences'. It features a search bar, a notification bell, and a user profile dropdown. A 'Profile' tab is selected, showing a list of settings: Profile, Preferences, Database, Notifications, and Security. The 'Profile Information' section contains input fields for 'Full Name' (Rajesh Kumar), 'Email Address' (demo@aimatesti.com), and 'Role' (admin), followed by a 'Save Changes' button.

The **Settings Page** allows users to manage their account and application preferences. It provides sections for **Profile, Preferences, Database, Notifications, and Security**. The Profile section displays basic user information such as **name, email address, and role**, with an option to save changes.

WORK FLOW DIAGRAM:

The overall workflow of **AI MatEsti** can be represented as:

Project Creation → Drawing Analysis → Material Estimation → Cost Estimation → BOQ Generation → Tender/Quotation → Reports

- 1. Project Creation** – A new construction project is created with details such as client, location, project type, and area.
- 2. Drawing Analysis** – Floor plans and drawings are uploaded. The system performs AI-assisted analysis to extract relevant project information.
- 3. Material Estimation** – Based on the project and drawing information, required construction materials and quantities are estimated.
- 4. Cost Estimation** – Material, labor, equipment, GST, contingency, and other expenses are calculated to determine the overall project cost.

5. **BOQ Generation** – A detailed **Bill of Quantities (BOQ)** is generated containing materials, quantities, rates, and amounts.
6. **Tender / Quotation** – The BOQ and estimated costs are used to prepare professional tender or quotation documents for the client.
7. **Reports** – Finally, comprehensive project reports are generated containing project, material, cost, and BOQ information.

Supporting modules: The **Materials Database** provides material rates and details throughout the estimation process, while **Settings and Data Storage** support user management, preferences, and project information.
